

## **TUCKER INDUCTION SYSTEMS ANNOUNCES NEW PRESIDENT AND OWNER**

(September 10, 2005, Shelby Twp., MI) Tucker Induction Systems, Inc. of Shelby Township Michigan announces the new ownership and President of Operations, **Mr. Rocky Tucker**. Rocky Tucker brings 10 (ten) years of leadership and management experience as President of Tucker Tool, Inc., the machining and tooling division that improved Tucker Induction Systems coil building operations with CNC machining and upgraded their capabilities to provide automated turnkey and cellular systems. Rocky brings additional diversified manufacturing experience to Tucker Induction Systems having been with them since they started in 1995.

“There is a tremendous depth of industry experience, knowledge and efficiency that is already in place and has been at Tucker Induction Services since 1976, “I will build upon this strong foundation to service our customers with even faster lead times while maintaining the same high level of professionalism as always,” notes Rocky. New products and technologies including a new line of standard and special induction equipment and power supplies are in process which will benefit lead times for customers while positioning the company for further growth. “We will remain strong as a lean, aggressive, diversified and valued supplier,” continues Rocky.

Tucker Induction Systems, Inc. produces a full line of induction heating equipment including custom turnkey systems. They also specialize in retrofitting and rebuilding any existing induction heating, and induction coils. A complete metallurgical lab is onsite for development and testing.

Tucker Induction Services, Inc. is known as the problem solvers in the induction heating industry. Tucker is well known as the designer of the industry’s first interchangeable quick-change coils for two-turns and single shot designs with correct clamping pressure. These make induction heating systems more efficient by allowing operators to only change coils, quenches or buses as needed rather than replace the entire assembly. This speeds set-up and minimizes downtime. Now, coil updates, part changeovers and repairs are easier, faster and more economical.

Automotive OEMs, Tier Suppliers, Off Highway Vehicle Manufacturers and Farm Implement Equipment Suppliers are Tucker Induction Systems main customer base. Appliance, Tooling and general metalworking manufacturers are also users of Tucker induction heating equipment.
